

Enjoy Cool Summer Savings!

Help ensure reliable power is available for everyone

Stay cool and comfortable while saving money

Help preserve natural resources for future generations

Smart Switch Cool Facts!

Why is SPU sponsoring this program?

This is one way we can reduce electric demand during critical summer peak periods. SPU expects summer peak demand to continue rising, on an annual basis, for the next 25 years, much of it due to increased air conditioning use. You can help slow the demand for power during peak hours by participating in programs like this.

Space is limited!

SPU will install approximately 250 new Smart Switch devices in 2010.

How long will my air conditioner be off?

On the few selected days we cycle, the compressor will cycle in 15 minute increments. For instance, off for 15 minutes, then on for 15 minutes. The fan continues to run, circulating the previously cooled air. Cycling will not occur on weekends or holidays.

Will cycling hurt my air conditioner?

Your air conditioner naturally cycles on and off as needed to maintain a set temperature in your home as determined by the setting on your thermostat. When SPU sends a signal to this switch, the air conditioner may cycle off for longer periods of time, but it will continue to operate without harming the unit.

When will the program run?

The Smart Switch program runs during June, July, August and September. Ongoing participation in future summer seasons is assumed as long as you live at your current residence.

Who is eligible?

Residential customers who live in SPU's electric service area and who use central air conditioning or a heat pump are eligible. Renters, those who live in an apartment or condominium, or customers who have a window or wall air conditioner do not qualify for the Smart Switch program.

Yes! I want to sign-up for SMART SWITCH. I would like the SMART SWITCH installed on my electric air conditioner.

Install my SMART SWITCH anytime.

Please call me for an appointment.
